# Contents

<b>1</b>	<b>The Special Theory of Relativity</b>	<b>9</b>
1.1	Pre-History of concepts about light . . . . .	9
1.2	Galilean Invariance . . . . .	10
1.3	Implications of and for Maxwell's Equations . . . . .	15
1.4	Pursuit of a special frame . . . . .	18
1.5	Michelson-Morley Experiment . . . . .	18
<b>2</b>	<b>Kinematics of special relativity</b>	<b>23</b>
2.1	Special Relativity . . . . .	23
2.1.1	Principles of Relativity . . . . .	23
2.2	Harry and Sally and Space Time Diagrams . . . . .	26
2.2.1	Introduction . . . . .	26
2.2.2	The Paradox of Harry and Sally . . . . .	26
2.3	The Relativity of Simultaneity . . . . .	27
2.3.1	Harry and Sally's Movements in a Diagram . . . . .	28
<b>3</b>	<b>The Nature of Space-Time</b>	<b>35</b>
3.1	The Problem of Coordinates . . . . .	35
3.2	The Lorentz Transformations . . . . .	40
3.2.1	The Relatively Moving Clock . . . . .	45
3.2.2	Derivation of the Lorentz Transformation . . . . .	48
3.2.3	Details of the Derivation of the Lorentz Transformations	49
3.3	Using Lorentz Transformations . . . . .	51
3.3.1	Time Dilation . . . . .	51
3.3.2	Length contraction . . . . .	53
3.3.3	The Doppler Effect . . . . .	54
3.3.4	Addition of velocities . . . . .	56
3.3.5	Time for Different Travelers . . . . .	59
3.3.6	Visual Appearance of Rapidly Moving Objects . . . . .	60

<b>4</b>	<b>Events, Worldlines, Intervals</b>	<b>63</b>
4.1	Introduction . . . . .	63
4.2	Place and Path in the Two Dimensional Plane . . . . .	63
4.3	Minkowski Space-time . . . . .	72
4.4	Causality and Trajectories . . . . .	78
4.5	The Hyperbolic Hangle . . . . .	80
4.5.1	The same result directly using calculus . . . . .	85
4.6	Four Vectors and Invariants . . . . .	85
4.6.1	Event Four Vector and Four Velocity . . . . .	85
4.6.2	Other Four Vector and Four Tensor Elements . . . . .	91
4.7	Harry, Dorothy, and Sally Revisited . . . . .	91
<b>5</b>	<b>Paradoxes of Relativity</b>	<b>95</b>
5.1	The Twin Paradox . . . . .	95
5.1.1	The Problem . . . . .	95
5.1.2	The Solution . . . . .	95
5.2	The Bandits and the Bullet Train . . . . .	96
5.2.1	The Problem . . . . .	96
5.2.2	The Solution . . . . .	96
5.3	The Boy in the Barn . . . . .	98
5.3.1	The Problem . . . . .	98
5.3.2	The Solution . . . . .	98
5.4	The Relativistic Manhole Cover . . . . .	98
5.4.1	The Problem . . . . .	98
5.4.2	The Solution . . . . .	98
<b>6</b>	<b>Uniform Acceleration</b>	<b>99</b>
6.1	Events at the same proper distance from some event . . . . .	99
6.2	Uniformly accelerated motion . . . . .	100
6.2.1	Details of the calculation of the acceleration . . . . .	101
6.3	The Proper Time along the Trajectory . . . . .	104
6.3.1	Timelike Trajectories and Accelerated Motion . . . . .	104
6.4	Examples using accelerated motion . . . . .	104
6.4.1	Deceleration . . . . .	104
6.4.2	Accelerated Rocket . . . . .	106
6.4.3	John Bell's Problem . . . . .	108
6.5	The Accelerated Reference Frame . . . . .	111

<b>7</b>	<b>Relativistic Dynamics</b>	<b>121</b>
7.1	General Principles of Dynamics . . . . .	121
7.2	Relativistic Action . . . . .	121
7.2.1	The Action for a Free Particle . . . . .	121
7.3	Energy and momentum of a single free particle . . . . .	123
7.4	Mass . . . . .	125
7.5	Kinetic Energy of a Single Particle . . . . .	126
7.6	Transformations of Momentum and Energy . . . . .	127
7.7	The Energy, Momentum, and Mass of Light . . . . .	128
7.8	Interactions . . . . .	129
7.9	Multi-particle Systems . . . . .	129
7.10	Rest energy of composite and elementary systems . . . . .	129
7.11	Applications of Energy Momentum . . . . .	129
<b>8</b>	<b>Introduction to General Relativity</b>	<b>131</b>
8.1	The Problem . . . . .	131
8.2	Free Fall Observers and the Equivalence Principle . . . . .	132
8.3	The Equivalence Principle . . . . .	134
8.3.1	The Monkey and the Hunter . . . . .	135
8.4	Direct Effects from the Equivalence Principle . . . . .	136
8.4.1	Universality and Eötvös–Dicke . . . . .	136
8.4.2	Bending of Light Rays . . . . .	138
8.4.3	Clocks and Accelerations in Towers . . . . .	139
8.5	Intrinsic Effects of Gravity . . . . .	141
8.5.1	Distortion of Elastic Bodies . . . . .	141
8.5.2	Gravitation and Tidal Forces . . . . .	143
<b>9</b>	<b>Geometry and Gravitation</b>	<b>149</b>
9.1	Introduction to Geometry . . . . .	149
9.2	Gaussian Curvature . . . . .	151
9.3	Example of negative curvature: the Pringle . . . . .	152
9.4	Curvature and Geodesics . . . . .	154
9.5	The Theorema Egregium and the Line Element . . . . .	156
9.5.1	Proof of Theorema Egregium . . . . .	157
9.6	Examples of Two Dimensional Geometry . . . . .	167
9.6.1	Euclidean Two Plane in Polar Coordinates . . . . .	167
9.6.2	The Unit Two Sphere in Euclidean Three Space . . . . .	171
9.6.3	The Two Torus . . . . .	174
9.6.4	The Accelerated Reference Frame Revisited . . . . .	176
9.6.5	The Hyperbolic Space-Time Two Surface . . . . .	177

9.7	Geometry in Four or More Dimensions . . . . .	178
9.8	Some notation and nomenclature: . . . . .	178
9.9	Coordinate Labels in General Relativity . . . . .	179
9.10	Distances and Time Intervals . . . . .	179
9.11	Einstein Equations . . . . .	183
<b>10</b>	<b>Effects of Gravitation</b>	<b>185</b>
10.1	Linearized Gravity . . . . .	185
10.1.1	Linearized Theory . . . . .	186
10.1.2	Analog to Electromagnetism . . . . .	187
10.1.3	Gravitational Waves . . . . .	187
10.2	Curvature around a Massive Body . . . . .	187
10.3	The Geometry and Evolution of the Universe . . . . .	187
10.3.1	Background Ideas . . . . .	187
10.3.2	Copernican Principle . . . . .	190
10.3.3	Olber's Paradox . . . . .	191
10.3.4	Hubble Expansion . . . . .	193
10.3.5	Implications of expansion . . . . .	196
10.3.6	Missing Mass . . . . .	202
10.4	The space time structure of the universe . . . . .	204
10.4.1	Black Body Background . . . . .	205
10.4.2	Problems with the Expanding Universe . . . . .	205
10.4.3	The Cosmological Constant . . . . .	205
10.4.4	The Standard Model of the Universe . . . . .	205
<b>11</b>	<b>Large Scale and Micro-physics</b>	<b>207</b>
11.1	Structure in the Universe . . . . .	207
11.2	The Inflationary Universe . . . . .	207
11.3	String Theory . . . . .	207
<b>A</b>	<b>Primer on Action</b>	<b>209</b>
A.1	Newtonian Dynamics . . . . .	209
A.2	Dynamics and Action . . . . .	211
A.2.1	Background on Formulation of Action . . . . .	211
A.2.2	Introduction to Action . . . . .	213
A.2.3	Definition of Action . . . . .	214
A.2.4	Trajectory of a Free Particle . . . . .	217
A.2.5	Proof that the Least Action Reproduces Newtonian Physics . . . . .	219
A.2.6	Examples of action – gravitation near a flat earth . . .	219

A.2.7	Same Example done another way . . . . .	222
A.2.8	More Examples of Actions . . . . .	224
A.3	The Nature of Symmetry in Physics . . . . .	229
A.3.1	Discrete Transformations . . . . .	229
A.3.2	Continuous Transformations . . . . .	230
A.3.3	Identity Transformation . . . . .	230
A.3.4	Examples of symmetry in situations like physics . . .	230
A.3.5	Physics transformations: . . . . .	231
A.4	Examples of Symmetry in physics . . . . .	231
A.4.1	Physics transformations: . . . . .	231
A.5	Symmetry and Action . . . . .	234
A.5.1	Introduction . . . . .	234
A.5.2	Galilean invariance . . . . .	237
A.5.3	More on Symmetry and Action . . . . .	238
A.5.4	Noether's Theorem . . . . .	238
<b>B</b>	<b>Introduction to Field Theory</b>	<b>245</b>
B.1	Action at a Distance and Field Dynamics . . . . .	245
B.1.1	Action at a Distance . . . . .	246
B.1.2	Local Field Theory . . . . .	248
B.2	The Stretched String . . . . .	249
B.3	Maxwell's Theory of Electromagnetism . . . . .	260
<b>C</b>	<b>Indexology</b>	<b>271</b>
C.1	Vectors and tensors under rotation . . . . .	271
C.2	General Coordinates Labels . . . . .	275
C.3	Fields and Manifolds . . . . .	279
C.3.1	Tensor Fields and General Transformations . . . . .	280
C.3.2	Nomenclature . . . . .	280
<b>D</b>	<b>Generalized Linear Theory</b>	<b>283</b>
